

Case Study: Colchester Rail Station, Essex

Client:

Overrail Services Ltd, Rochford, Essex

Project:

Reroofing the existing roof to a building within the site of Colchester Rail Station which was undergoing refurbishment within.

Completed:

2015

Overrail Services Ltd approached Mells roofing Ltd to overlay the existing roof to a building within the site of Colchester Rail Station which was undergoing refurbishment within.

On our initial inspection, requirements were to fully overlay the existing roof, but on closer inspection it was revealed that due to the poor condition of the roof, a full strip of the existing roof was required.

Mells Roofing were able to conform to the Health and Safety requirements of our client. All our employees on site follow a Health and Safety training programme and hold certificates in Working at Heights, Harness and Lanyard and First Aid to name but a few. We were able to offer our client a 25 years guarantee from Icopal, the manufacturers system used, giving the client peace of mind.

Our work was completed on time, within Overrail Services budget and conformed to Health and Safety requirements. The work was carried out whilst renovation to the internal building took place, avoiding interruption to the refurbishment programme.
