

## Case Study: Randolph Close, Leigh on Sea, Essex

Our task in this project was to replace roofing to 28 dwellings in Leigh on Sea, Essex. The job consisted of Flat and Sloping Bituminous roofing, including recovering porches and related tasks such as gutter linings, leadwork, purpose made pipe collars, flashings, woodwork and other sundries. A key element of the effectiveness of this project was the installation of The Icopal Thermazone 120mm thick Insulation board. On top of this was laid Icopal venting underlay and completed with Icopal Firesmart Bituminous roofing in a visually pleasing brown mineral finish. Mells Roofing were able to conform to the Health and Safety requirements of our client. All our employees on site follow a Health and Safety training programme and hold certificates in Working at Heights, Harness and Lanyard and First Aid to name but a few.

We were able to offer our client a 20 year Insured System Plus guarantee from Icopal, the manufacturers system used, giving the client peace of mind.

Our work was completed on time, within budget and conformed to Health and Safety requirements.
